

**ABSTRACT OF THE DISCLOSURE**

An expanding wellbore junction system, apparatus and methods are  
5 provided for forming a sealed wellbore intersection in a subterranean well. In  
one described method, an expandable wellbore junction is expanded within an  
under-reamed cavity in a wellbore. Intersecting tubular legs of the wellbore  
junction are then drifted using a drifting apparatus. A deflection device may be  
used to direct a drift of the drifting apparatus into a selected one of the wellbore  
10 junction legs.
